Pharmacovigilance Interview Questions

Basic Concepts & Definitions

Q1: What is pharmacovigilance? Define it and explain its importance.

Q2: What is the difference between pharmacovigilance and drug safety monitoring?

Q3: What is an Adverse Drug Reaction (ADR)? Classify them.

Causality Assessment

Q4: What is causality assessment? Name and explain the major scales used.

Q5: Explain temporal relationship and dechallenge/rechallenge concepts.

Regulatory & Reporting Aspects

Q6: What are MedDRA and Pharmacovigilance System (PhVS)?

Q7: What is the NDA/IND and post-marketing surveillance obligations?

Q8: What is a Safety Update, PERIODIC SAFETY UPDATE REPORT (PSUR), and Development Safety Update Report (DSUR)?

Signal Detection & Risk Management

Q9: Define signal detection. What are the methods and tools used?

Q10: What is risk-benefit assessment? Explain Risk Minimization Strategies (RMS).

Clinical Scenarios & Problem-Solving

Q11: A patient on metformin develops lactic acidosis. How would you assess causality using Naranjo?

Q12: What would you do if you identified a potential new safety signal in a drug?

India-Specific Regulations

Q13: What are India's pharmacovigilance regulations (GVKS, PvPI)?

Q14: What does CDSCO expect from pharmaceutical companies in India regarding pharmacovigilance?

Advanced Topics

Q15: Explain the concept of Risk Evaluation and Mitigation Strategies (REMS) with an example.

Q16: What is pharmacokinetic-pharmacodynamic (PK-PD) relationship in adverse effects?

Q17: How do you differentiate between drug-drug interactions and pharmacovigilance concerns?

Q18: What is a "cluster" in pharmacovigilance? How is it

detected?

Data Management & Tools

Q19: What is VigiBase? How is it used in pharmacovigilance?

Q20: Compare FAERS, EudraVigilance, and VigiBase.
